Hai Ba Trung, Ha Noi

Summary

Flutter Developer with 2+ years of hands-on experience building and maintaining production mobile applications. Experienced in real-time features, third-party SDK integration, and performance optimization.

Skill

- Languages: Dart, JavaScript, Kotlin, Java, Swift
- Frameworks & Libraries: Flutter, Flutter Web, Unity (AR integration)
- State Management: Bloc / Cubit, Provider, Riverpod, GetX
- Mobile Features: REST API, Firebase (Auth, Firestore, FCM), Push Notifications, Background Services, SocketIO
- Tools & Technologies: Git, GitHub, Figma, Android Studio, XCode, VS Code, Postman, Firebase, Slack, Jira

Work Experience

- BSM Labs - Flutter Developer 03/2024 - Present
 - Built, released, and maintained 4 cross-platform Flutter apps across healthcare, AI, AR, and document management domains, covering full lifecycle: feature development, bug fixing, performance optimization, and deployment.
 - Implemented UI/UX from Figma designs, including custom widgets, animations, responsive layouts, and navigation flows.
 - Optimized app stability by resolving crashes, memory issues, and widget rebuilds; integrated REST APIs and third-party SDKs (e.g., wearable Hband).
 - Developed real-time features using Socket.IO for data sync/messaging and SSE for streaming; embedded Unity for AR integration with Flutter-Unity communication
 - Collaborated with backend/design teams, following clean coding practices and Git workflows.

HMUH AI – AI Healthcare App ([Android](#) | [iOS](#))

Flutter · Bloc · Clean Architecture · Firebase · Shared Preferences · Notifications · Hband SDK · Bluetooth · Charts · SocketIO

- Developed AI-powered features: health consultations, meal recommendations, image-based food analysis, and interactive learning modules for user engagement.
- Integrated Hband wearable SDK via platform channels for real-time health data collection, backend sync, and visualization through interactive charts.
- Built streaming chatbot with SSE.
- implemented real-time doctor-patient chat using Socket.IO and Bloc state management.
- Added FCM push notifications with background handling for health alerts/updates.

VDI AI DX – Internal AI Chatbot (Internal Project)

Flutter · Cubit · REST API · Server-Sent Events (SSE) · Markdown Rendering

- Developed an internal AI-powered knowledge assistant app to enable quick search, retrieval, and interaction with company documents and resources.
 - Implemented AI response streaming using SSE for real-time, efficient updates.
 - Optimized chat state management with Cubit to handle streaming updates, loading states, and errors effectively.
 - Built reusable chat UI components supporting markdown rendering and dynamic message updates.
 - Enhanced performance with incremental markdown rendering to prevent unnecessary rebuilds, eliminate UI jank, and ensure smooth scrolling during streaming.
 - Integrated secure backend REST APIs for document querying, user authentication, and state synchronization.
- Newwave Solutions - Flutter Developer 08/2023 – 03/2024
 - Implemented reusable Flutter UI screens/components from Figma for multiple client projects.
 - Integrated REST APIs and managed data flow using Provider/Riverpod.
 - Worked in team environments with clean coding, Git-based workflows, and collaborative processes.

Education

Engineer's Degree – Computer & Communication Networks

University of Transport Technology

[2019 - 2023]

English

Able to read technical documentation and communicate in team discussions.
